
LinkedIn's Cap of
100 Invites a
Week Caught Up
With Us.
Here's what we built in 72 hours →
Adithya Murali
Founder, AI RevOps

Early 2024. A software client in logistics needed webinar registrations.

Our core funnel for it: LinkedIn outreach.

Then LinkedIn's limit of 100 connection requests a week caught up with the funnel.

The cap wasn't new. But with LinkedIn at the core of the funnel, it was now the ceiling.

So we asked one question: could we run outreach across email, SMS, WhatsApp, LinkedIn and calls, fully automated?

We kept it simple.

1. One API provider per channel: an email API, Twilio for SMS, Unipile for LinkedIn and WhatsApp, Vodex for AI calls.
2. One automation per channel, with follow-ups and AI personalisation, in a few make.com scenarios.
3. One Google Sheet holding it all together.

72 hours later, outreach was live on every channel.

The part nobody mentions: it took another week before we could even read the replies.

We had to build inbox sheets just to see what prospects were asking.

A week later we were back on track, reaching hundreds of prospects a day.

One channel is a single point of failure. Five channels is a system.

A few months later we pivoted to building AI automation full time.

That setback led to the AI platform I build today.

sometimes,
the
simplest
tools are
the most
powerful.
